

Preprocess the QoS parameters using Eq. 1 and Eq. 2

Initialize population and hyperparameters

Prepare Objective function using Eq. 3, Eq.4, and Eq. 5

Identify the best and worst solution for the initial randomly initialized population

Initialize design variables using Eq. 8

$$Q' = w_{it} \times Q + r_1 \times UB - r_2 \times UW$$
  
Using Eq. 9 and Eq. 10

Is the present solution is best than the global best solution

Yes

Update the present best solution as global best solution.

No

Keep the previous global best solution

Termination criteria met?

Yes

Optimal solution
